NAME: VANSHAJ SAXENA

REG NO:25BAI11239

BRANCH:CSE(AIML)

YEAR:2025-2029

COURSECODE:CSE0001

COUSENAME:DIGITAL LITERACY

DATE:26TH MARCH 2026

PROJECT REPORT 1

Design Tool & Process For this task, I used Canva to design a high-impact, vertical infographic. I chose Canva because of its extensive library of academic elements and its intuitive drag-and-drop interface, which allowed me to focus on content hierarchy rather than complex graphic design. My final design covers three critical pillars of modern student life: What Digital Literacy Is, Essen al Student Tools (specifically No on and Google Scholar), and Professional Online Presence (focusing on LinkedIn optimization). I used a high-contrast colour scheme (dark blue and white) with a "notebook" aesthetic to make the information on feel academic yet modern, ensuring it is easily scannable for my batchmates. Reflections & Challenges What I found most interesting

while creating this infographic was the challenge of Informa on Architecture. Condensing broad topics like "Digital Literacy" into just a few bullet points required a deep understanding of what is truly essential for first-year CSE AIML student. I initially

struggled with "visual cluster"—trying to fit too many icons and text boxes into one space. I had to learn to use "white space" effectively to guide the reader's eye from one sec on to the next. Interestingly, finding the right balance between being "visually appealing" and "technically accurate" helped me realize that digital literacy is not just about knowing the tools, but about communicating information clearly and responsibly in a digital-first world.

PROJECT REPORT 2

Platform Selection & Professional U lity

For this module, I established and refined my professional presence on GitHub, LinkedIn, and Kaggle. I selected these specific platforms because they represent the essen al "technical identity" required for a career in Artificial Intelligence. GitHub acts as my primary version-controlled repository, allowing me to host my source code and demonstrate my proficiency in Python and collaborative development. LinkedIn serves as my professional networking hub, where I can build a credible brand, connect with industry experts from firms like Delottie, and track internship opportunities. Finally, Kaggle is indispensable for an AIML student, providing access to real-world datasets and competitive machine

learning challenges that validate my data science skills. Four-Year Strategic Plan Over the next four years, I intend to use these platforms as a living record of my academic and technical evolution. On GitHub, I will maintain a consistent "commit" history by documenting my progress in Data Structures and AI algorithms. On LinkedIn, I plan to share my certification, project milestones, and reflections on emerging AI trends to ensure I am "industry-ready" by graduation on in 2029. On Kaggle, I aim to progress from a "Novice" to a "Contributor" by engaging with the global data science community. By systematically ng these profiles, I am creating a high impact digital footprint that provides verifiable proof of my expertise to future recruiters and collaborators.

PROJECT REPORT 3

Coding Practice & Problem Solving

In the first part of this module, I established an account on **HackerRank** to begin my journey in competitive programming. I successfully completed the **"Solve Me First"** and **"Python Introduction"** challenges, which helped me practice basic input/output operations and arithmetic logic in Python. These challenges are foundational for a **CSE AIML** student, as they build the algorithmic thinking necessary for developing complex machine learning models. By earning my first stars and badges on this platform, I have initiated a habit of consistent coding practice that will be essential for clearing technical interviews and mastering Data Structures

and Algorithms (DSA) over the next four years.

Collaborative Tools & Google Workspace

For the collaboration component, I utilized **Google Forms** and **Google Sheets** to develop a **"Digital Literacy Awareness Quiz."** I designed a five-question assessment that included multiple-choice questions on phishing and short-answer prompts regarding digital footprints. This exercise demonstrated how cloud-based tools can be used to gather and analyse data in real-time. Academically, mastering Google Workspace is vital for group projects and research data collection. The ability to link a Form to a Sheet allows for automated data organization, which is a core skill in data science. These platforms

will help me remain organized, collaborate efficiently with my batchmates, and conduct academic surveys throughout my engineering degree.

PROJECT REPORT 4

The Impact of Poor Digital Communication: A Case Study

A common real-world problem occurs when students use informal "text-speak" or vague language in professional settings, such as when emailing a professor or an internship coordinator at a firm like **Deloitte**. In a notable hypothetical scenario, a student missed a crucial scholarship deadline because they sent a subject-less email from an unprofessional address—coolgamer123@gmail.com—simply asking for "help with the link." Because the email lacked a clear identity, the coordinator dismissed it as spam or a phishing attempt. By the time the student realized their mistake and followed up, the application portal had officially closed,

resulting in a lost financial opportunity and a damaged professional reputation.

To prevent this, the student should have adhered to **Professional Email Etiquette**. This includes using a descriptive subject line, a formal salutation, and their official university email address. Providing specific details—such as their **Registration Number** and a clear explanation of the technical issue—would have allowed the coordinator to provide an immediate solution. Ultimately, clear and structured digital communication transforms a potential failure into a successful professional interaction, ensuring that important opportunities are never lost due to simple clerical oversights.

PROJECT REPORT 5

Reflection on Cyber Safety

While researching cybercrime for this project, I was most surprised by the psychological sophistication of **Social Engineering**. I previously believed that cybercrime was purely technical hacking, but I realized that most attackers simply exploit human emotions like urgency, fear, or the excitement of a "job offer" from a firm like **Deloitte**. Seeing how easily a "spoofed" website can look like an official university portal was a major eye-opener.

As a result, the one habit I will personally change is my approach to **UPI transactions**. I used to assume that scanning a QR code was always safe, but I will now be extremely vigilant about never entering my PIN unless I am the one

intentionally making a payment. I have also committed to using a dedicated **Password Manager** to ensure that a leak on one platform does not compromise my entire digital identity, especially my academic and professional accounts.

CONCLUSION

Conclusion: Overall Learning and Professional Growth

Completing this project as a **Student Digital Ambassador** has been a transformative experience, shifting my perspective from a passive technology user to a proactive digital citizen. I have learned that digital literacy is not merely the ability to use software, but the mastery of one's professional identity and the critical evaluation of information.

By synchronizing my presence across **GitHub, LinkedIn, and Kaggle**, I have built a verifiable "technical narrative" that demonstrates my skills in **AIML** to future employers. Furthermore, the deep dive into cybercrime has taught me that the human element is often the weakest link

in security; hence, vigilance and "digital hygiene" are as important as technical firewalls. Ultimately, this project has equipped me with the foundational communication, collaboration, and security skills necessary to navigate the complex digital landscape of a modern engineering career.

REFERENCE AND TOOLS

The following platforms, tools, and official resources were utilized throughout the execution of this project:

1. Professional & Technical Platforms

- **GitHub:** github.com – Used for version control and professional profile hosting.
- **LinkedIn:** linkedin.com – Used for professional networking and career identity.
- **Kaggle:** kaggle.com – Used for Data Science and AIML portfolio development.
- **HackerRank:** hackerrank.com – Utilized for Python coding challenges and algorithmic practice.

2. Design & Collaboration Tools

- **Canva:** canva.com – Used for creating the Digital Literacy infographic.
- **Google Workspace:** workspace.google.com – Specifically **Google Forms** and **Google Sheets** for data collection and analysis.

3. Cybersecurity Resources

- **National Cyber Crime Reporting Portal:** [suspicious link removed] – Referenced for official reporting procedures in India.
- **Cyber Crime Helpline: 1930** – Cited as the primary contact for financial fraud prevention.
