Design Tool & Process

For this task, I used Canva to design a high-impact, vertical infographic. I chose Canva because of its extensive library of academic elements and its intuitive drag-and-drop interface, which allowed me to focus on content hierarchy rather than complex graphic design. My final design covers three critical pillars of modern student life: What Digital Literacy Is, Essential Student Tools (specifically Notion and Google Scholar), and Professional Online Presence (focusing on LinkedIn optimization). I used a high-contrast color scheme (dark blue and white) with a "notebook" aesthetic to make the information feel academic yet modern, ensuring it is easily scannable for my batchmates.

Reflections & Challenges

What I found most interesting while creating this infographic was the challenge of Information Architecture. Condensing broad topics like "Digital Literacy" into just a few bullet points required a deep understanding of what is truly essential for a first-year CSE AIML student. I initially struggled with "visual clutter"—trying to fit too many icons and text boxes into one space. I had to learn to use "white space" effectively to guide the reader's eye from one section to the next. Interestingly, finding the right balance between being "visually appealing" and "technically accurate" helped me realize that digital literacy is not just about knowing the tools, but about communicating information clearly and responsibly in a digital-first world.
